

After running my initial accessibility test the results were as follows

Semantic Links

Missing Title

Page Language

I was able to fix these by applying the fixes it recommended

When running these on popular websites i get a lot of the Semantic Links issues, most don't have any alarming issues and are just things that should be fixed but still allow screen readers to help.

	Semantic links WCAG 2.0 A 1.3.1	1
	Missing title WCAG 2.0 A 2.4.2	1
	Page language WCAG 2.0 A 3.1.1	1
